

Versa Guardian

On a per-rule basis:

- Limit simultaneous client connections
- Limit states per host
- Limit new connections per second
- Define state timeout
- Define state type

Optional Feature rich functionality of Raptor Spam Filter ensures complete email server safety. Revive your mail server with the best Spam Filter!

Network Firewall and Router

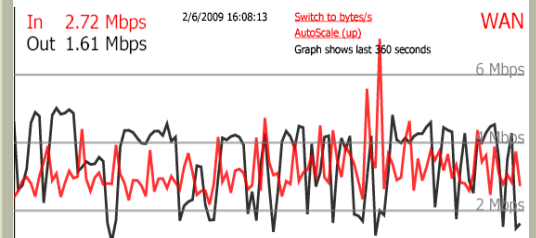

Guardian includes most all the features in expensive commercial firewalls, and more in many cases. The following is a list of features currently available in the Guardian 1.2 release. All of these things are possible in the web interface, without touching anything at the command line.

- Filtering by source and destination IP, IP protocol, source and destination port for TCP and UDP traffic
- Able to limit simultaneous connections on a per-rule basis
- Guardian utilizes an advanced passive OS/network fingerprinting utility to allow you to filter by the Operating System initiating the connection. Want to allow FreeBSD and Linux machines to the Internet, but block Windows machines? Guardian can do so (amongst many other possibilities) by passively detecting the Operating System in use.
- Option to log or not log traffic matching each rule.
- Highly flexible policy routing possible by selecting gateway on a per-rule basis (for load balancing, failover, multiple WAN, etc.)
- Aliases allow grouping and naming of IPs, networks and ports. This helps keep your firewall rule set clean and easy to understand, especially in environments with multiple public IPs and numerous servers.
- Transparent layer 2 firewalling capable - can bridge interfaces and filter traffic between them, even allowing for an IP-less firewall (though you probably want an IP for management purposes).
- Packet normalization - Description from the scrub documentation - "'Scrubbing' is the normalization of packets so there are no ambiguities in interpretation by the ultimate destination of the packet. The scrub directive also reassembles fragmented packets, protecting some operating systems from some forms of attack, and drops TCP packets that have invalid flag combinations."

A powerful, flexible Firewalling, Security and Routing Platform.

Key Benefits of the Guardian

- Security Firewall
- Enhanced Routing
- Flexible VPN Connectivity
- Redundancy
- Monitors and Graphs
- Load Balancing
- DHCP Services

Purchase Options

Professional Edition	\$495	50 User
Enterprise Edition	\$995	250 User
Versa Support 8x5 <i>with Instant Replacement</i>	\$149	per year
Remote Status Monitor	\$99	per year

Versa Smart Service Lease Options

Registration	\$295	
Base Subscription	\$99	per month
Enterprise Subscription	\$199	per month
• Update Assurance		
• 24 hour hot spare		
• Remote Status Monitor		
• Versa Support with iReplacement		

Add On Options for Versa Multi-Core

Redundant Drive	\$299
Web Filter / Proxy	\$499 per year
Raptor Spam/Virus Filter	\$599 per year
